

# How to Make your Seaside Scene

Colour the background scene, the waves and the buckets etc. Add some of your own if you like or cut out pictures to put in. Stick the pictures into the scene.

Cut out the two strips from the template with the waves on.

Tape the ends of the thinner strip to the back of the boat and ensure the loop in the strip goes around the wider strip.

Staple the wider strip to the background scene at either side.

Now your boat can be moved along the strip but will never fall out of your picture.

Place the waves along the bottom of your picture and staple in place at the sides. Now the waves cover up the other strip and your boat can bob along them as you move it.
